

A horizontal beam is shown with five segments. The segments are labeled with their lengths: 20, 40, 60, 80, and m. The segments are separated by vertical lines. The segments with lengths 40 and 80 are shaded gray. Above the beam, there are several red arrows pointing downwards, indicating forces or moments. The arrows are located at the boundaries of the segments and at the midpoint of the 60 segment.
